
Network Setup

If you purchased the **Multi-Computer** or **Multi-Location Package** from DaySmart Software, Inc. and will use your software in a network environment, it is the responsibility of the user to setup and maintain the Windows network. Please see the User's Guide or Windows Help file for complete information on how to setup your Windows network. Once the Windows network has been established follow the steps below to setup your software network. **We highly recommend that the network be setup and maintained by an experienced network administrator.**

Setup Server Computer

The server is the computer that contains the software database. The other computers are called clients. Generally, the fastest or most heavily used computer should be the server. The server is also the only computer that will be able to backup the database. **It is recommended that this computer contains a USB flash drive or some type of removable media to backup copies of the database.**

On the server, perform the following steps:

- 1. Install your software:** Insert the software CD into the computer and select **[Install Software]**¹, or download the software from:
 - **Salon Iris Software:** <http://www.cmjdownloads.com/Iris/SalonIrisSetup.exe>.
 - **Orchid Medical Spa Software:** <http://www.cmjdownloads.com/Orchid/OrchidSetup.exe>
 - **123Pet Software:** <http://www.cmjdownloads.com/123Pet/123PetSetup.exe>
 - **InkBook Software:** <http://www.cmjdownloads.com/InkBook/InkBookSetup.exe>Follow the instructions given by the installation wizard.
- 2. Register your software:** Start the software and select **Register** from the **Help** drop-down menu. Enter the serial number listed on your invoice, or the serial number that was provided to you when you purchased your software from DaySmart Software.
- 3. Select Server:** You may be prompted to select the server. If not, select **Database Controls** from the **File** drop-down menu and click the **Select Server** button.
 - a.** Select the first option stating: **This computer is the server**. Take careful note of the name of the server computer. You will need this name when you setup the client computers.
 - b.** Type in **[COMPUTERNAME]\CMJ**, and click **Connect**.
 - c.** If it fails to connect, click the **Auto Setup** button².
- 4. Wait for Setup to Finish:** Select the database type to start with. A new database will be created. Wait for this process to complete before continuing to the next step. Follow the instructions on the screen to set a password. Take careful note of this password and save it in a safe place.

1: If you encounter any problems with installation, please refer to the Getting Started guide that came with the software, or refer to your software's website for installation instructions.

2: If you encounter any problems connecting to the SQL Server, please refer to the [Definitive Guide to SQL Server Troubleshooting](#).

Setup Client Computers

On each of the client computers, perform the following steps:

1. **Install your software:** Insert the software CD into the computer and select **[Install Software]**, or download the software from:

- **Salon Iris Software:** <http://www.cmjdownloads.com/Iris/SalonIrisSetup.exe>.
- **Orchid Medical Spa Software:** <http://www.cmjdownloads.com/Orchid/OrchidSetup.exe>
- **123Pet Software:** <http://www.cmjdownloads.com/123Pet/123PetSetup.exe>
- **InkBook Software:** <http://www.cmjdownloads.com/InkBook/InkBookSetup.exe>

Follow the instructions given by the installation wizard.

2. **Register your software:** If you have not already done so, start the software and select **Register** from the **Help** drop-down menu. Enter the serial number listed on your invoice, or the serial number that was provided to you when you purchased.
3. **Select Server:** You may be prompted to select the server. If not, select **Database Controls** from the **File** drop-down menu and click the **Select Server** button.
 - a. Select the second option stating: **This computer is a client**, and then enter your server name and click **Connect**.
 - b. If you cannot remember the name, click the **Auto Setup** button. Select the server computer from the list and click **OK**. The client computer will then attempt to connect to the database on the server computer.
 - c. If it prompts you for a password, enter the server computer's password that you set in **Step 4**, above.

Important Notes

There are important notes to consider when operating on a network environment.

- The proper operation of the network can be critical to the operation of your business. We recommend that the network be setup and maintained by an experienced network administrator.
- The automatic backup feature only works on the server while your software is running. **Therefore, we highly recommend that the software always runs on the server.**
- The server must be turned on before any client computers can be used.
- The server is the only computer that can backup, restore, or create a new database.
- To select how often the network computers will check for changes from other computers, such as new appointments, go to the **Tools** drop-down menu, select **Options**, and click the **Scheduling** tab. Under **Appointment Book Auto Refresh Rate** you can select how often the appointment book updates.
